**The Future Of
Heating is
Much
Greener
Than
You
Think**

**GET
THE
FACTS**

Fueling a Greener Future for Your Family

You've trusted **Oilheat** to keep you and your family comfortable for years because you know it's a **safe, clean, consistent** and **reliable** source of home heating. Now, the next generation of Oilheat, Bioheat® fuel, is providing an even safer, cleaner and greener source of home heating, and securing a **healthier, more sustainable future** for generations to come. Bioheat® fuel is a blend of renewable biodiesel (usually from 2% - 5%) with conventional heating oil. Its biodiesel component is made from vegetable oils and other domestically produced feed stocks that are non-toxic and biodegradable.

So, before you think about converting to natural gas, consider that:

- **Bioheat® fuel lowers emissions** compared to petroleum fuels¹.
- Bioheat® fuel is usually combined with Ultra-Low Sulfur Diesel, which has a maximum sulfur content of 15 parts per million. ULS Bioheat® fuel **reduces sulfur emissions by 99%** and total particulate emissions by over 70% compared to conventional heating oil².
- **You can use Bioheat® fuel in your existing Oilheating equipment, without any equipment changes.** Your heating company may already be delivering Bioheat® fuel to you!

Furthermore, unlike natural gas, which is primarily supplied by big, foreign-owned corporations³, **Bioheat® fuel is most often brought to you by a small, local business.** These full-service home comfort companies provide **automatic fuel delivery, budget plans, equipment service agreements** and various other quality services that **give you and your family peace of mind**, something you just can't get from the natural gas utilities. To get more of the facts, visit www.americanenergycoalition.org or contact your local Bioheat® fuel dealer.
