DO THE MATH.

Converting to Gas Just Doesn't Add Up!

What you don't know CAN hurt you!

The utilities are again spreading incomplete information to dupe homeowners into switching to natural gas. Make sure you calculate all the costs before you change your heating fuel.

- **ADD UP Gas Prices!** That too-good-to-be-true price they're quoting is only **half of your costs**. You'll also pay a **customer service charge, delivery charge, conservation adjustment, sales services charge and other miscellaneous charges** in addition to the commodity cost of the fuel.¹
- **ADD UP Conversion Costs!** Did they tell you that **converting to gas could cost you \$10,000 or more that will take years to recoup**.²
- **MULTIPLY Gas Line Surcharges!** The utility can charge **thousands of dollars upfront or increase your delivery charge forever**, to connect you to a new main gas line. Homeowners in some neighborhoods have been talked into converting to gas, only to find out later that they would be **charged higher gas prices to pay for the new gas line**.³

When the gas utility tries to convince you to switch, tell them **their numbers don't add up to savings!**

There's a Better Equation to Lower Heating Costs!

- **SUBTRACT AND SAVE on Fuel Costs.** Upgrade to a new high efficiency oil-fired boiler or furnace that could **reduce your fuel bills by up to 40 percent**.
- **SUBTRACT AND SAVE with NO Additional Charges.** Stay with Oilheat and **you won't have any extra charges** for tank removal, chimney lining, gas piping and more, because you won't need these additional installations.
- **PLAN AHEAD AND SAVE EVEN MORE with Budget Plans.** A budget plan splits your heating bills into manageable monthly payments.

Talk to your Oilheat Dealer to discover more ways to reduce your heating costs and save!
